

Zend Form Example

**** designed for Magento enterprise edition 1.13 ****
**** has not been tested on magento community ****

The purpose of this module is to create a form that utilizes zend form and service class. The Zend Form class, and the service class are very reusable and can be applied to a variety of other situations.

This new shipping method will calculate the shipping cost based on the square footage multiplied by the cost per square foot.

Installation Instructions:

- 1.) Unzip the module file and copy the app and skin directories into your site's public folder.
- 2.) Flush the cache storage.

Instructions:

- Go to the domain this is installed on and visit /apartment to view the form.
- Note: this form does not utilize Magento javaScript validation, because I wanted to demonstrate what zend form can do.
- Below is a picture of the form when validation fails.

Value is required and can't be empty
'bademail' is no valid email address in the basic format local-part@hostname
'five hundred' must contain only digits

Apartment Form

* Name	<input type="text" value="Westerly"/>
